ELECTION / RESTRICTION

LACK OF UNITY

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, Claim(s) 1-14, 17-23 drawn to a method of diagnosing cancer

Group II, Claim(s) 15-16 drawn to method of treating a patient with cancer.

2. **Groups I and II** lack unity :

Groups I and II, as drawn, do not relate to a single general inventive concept because the claims are not linked by the same or corresponding special technical feature. Groups I and II, as drawn, are related to each other in that they both comprise a methylated SPARC nucleic acid. However, as a methylated SPARC nucleic acid was known- see, at least, for example, Sato et al [Oncogene 22(32) : 5021-5030 (2003)] - the claims are no longer linked by the same or corresponding special technical feature, because by definition, the special technical feature must distinguish over the prior art. Without the special technical feature the claims lack unity.

3. Because these inventions lack unity for the reasons given above, restriction for examination purposes as indicated is proper.

Art Unit: 1634

4. The examiner, on 06 SEP 07, attempted, but failed to reach the applicant regarding an oral election to the above restriction requirement. The applicant is advised that the response to this requirement, to be complete, must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
